*As winter's cold days and longer nights end, and the last of snow and ice melt away, there is a short window of time, a month that shares itself with winter and spring, March. Although it only has 31 days, so much change happens to the earth, weather and nature. March makes her presence known, with her high pitch song of whistling winds, the wild gusty breezes, her clouds and sky become full of white like fleece set in deep blue sky, shorter days, longer nights. March sings out, waking Spring!*
